SUMMARY

Azure-focused early-career DevOps / Cloud Support candidate with an M.S. in DevOps Engineering and hands-on experience building and securing cloud infrastructure in a self-managed Azure homelab. Comfortable working across Azure and AWS environments, provisioning infrastructure with Terraform and Azure CLI, and supporting containerized workloads with Docker and Kubernetes.

EDUCATION

Western Governors University

M.S., Software Engineering - DevOps Engineering

Millcreek, UT

March 2026

California State University, Fullerton

B.S., Computer Science

Fullerton, CA

PROJECTS

Azure Homelab - Cloud Infrastructure & Networking Environment

Microsoft Azure (VNet, Storage, App Service, Log Analytics, NSG/ASG), Azure CLI

- Designed and provisioned an Azure resource group entirely via Azure CLI, including a virtual network, subnets, and an App Service-hosted web app
- Configured Storage account network security using both Service Endpoints and Private Endpoints, and resolved private DNS for secure, private connectivity
- Implemented Network Security Groups and Application Security Groups to segment and control traffic across web, private, and management tiers
- Applied resource locks to protect critical infrastructure from accidental deletion or modification, and deployed a Log Analytics workspace for centralized monitoring

StackWatch - Full-Stack Monitoring Dashboard

React (Vite), Node.js, Docker, NGINX, AWS EC2, Terraform, Prometheus, Grafana

- Provisioned cloud infrastructure using Terraform, configuring EC2, security groups, and Elastic IP for stable, repeatable deployments
- Containerized services with Docker and deployed to AWS, using NGINX as a reverse proxy on port 80
- Integrated Prometheus and Grafana with threshold-based alerting to monitor system resource usage and application health
- Built a Node.js API to collect CPU and memory metrics, streamed to a React dashboard via 5-second client-side polling

WORK EXPERIENCE

CLS Properties

Developer - Contract

Remote

March - June 2025

- Contributed to system architecture decisions and proposed cost-effective tech stack choices to reduce long-term infrastructure costs
- Collaborated with stakeholders to translate requirements into technical solutions across a small cross-functional team
- Delivered features in a fast-paced environment, coordinating with team members using Git-based workflows and Slack

Audio Visual Solutions

Entry-Level IT Technician - Contract

Anaheim, CA

November 2024

- Installed and troubleshooted computer systems and network-connected equipment in live, client-facing environments

TECHNICAL SKILLS

Cloud & Infrastructure: Microsoft Azure, AWS (EC2, EKS), Terraform, Docker, Kubernetes, Linux, NGINX

CI/CD & Source Control: GitLab CI/CD, Argo CD, Git, GitHub, Bitbucket

Monitoring & Observability: Prometheus, Grafana

Languages: Python, JavaScript, TypeScript

Databases & Other: PostgreSQL, Supabase, Jira
