SUMMARY

Azure-focused Cloud & Infrastructure candidate with an M.S. in Software Engineering (DevOps Engineering) and hands-on experience designing, deploying, and securing cloud infrastructure through a self-managed Azure homelab. Experienced with Azure networking, infrastructure as code using Terraform, Linux administration, Azure CLI, Docker, and monitoring solutions. Currently expanding expertise in cloud automation and DevOps while seeking an entry-level Cloud Engineer, Infrastructure Engineer, DevOps, or Cloud Support role.

EDUCATION

Western Governors University

M.S., Software Engineering - DevOps Engineering

Millcreek, UT

March 2026

California State University, Fullerton

B.S., Computer Science

Fullerton, CA

PROJECTS

Azure Homelab - Cloud Infrastructure & Networking Environment

Microsoft Azure (VNet, Storage, App Service, Log Analytics, NSG/ASG), Azure CLI

- Provisioned Azure infrastructure using Azure CLI, including resource groups, virtual networks, subnets, storage accounts, and App Services.
- Designed secure network segmentation using Network Security Groups (NSGs) and Application Security Groups (ASGs) across web, management, and private network tiers.
- Configured Azure Storage networking with both Service Endpoints and Private Endpoints, including private DNS resolution for secure resource access.
- Implemented centralized monitoring using Log Analytics Workspace and applied Azure Resource Locks to protect critical infrastructure from accidental modification or deletion.

StackWatch - Full-Stack Monitoring Dashboard

React (Vite), Node.js, Docker, NGINX, AWS EC2, Terraform, Prometheus, Grafana

- Provisioned AWS infrastructure with Terraform, including EC2 instances, security groups, and Elastic IPs for repeatable deployments.
- Containerized application services with Docker and deployed them behind an NGINX reverse proxy.
- Implemented Prometheus and Grafana to monitor infrastructure and application health with threshold-based alerting.
- Developed a Node.js backend to collect and expose system metrics consumed by a React dashboard for near real-time monitoring.

WORK EXPERIENCE

CLS Properties

Developer - Contract

Remote

March - June 2025

- Developed and maintained user-facing features using React, translating Figma designs into responsive web interfaces.
- Integrated Supabase to support application data management, enabling communication between the React frontend and backend services.
- Collaborated with stakeholders to refine requirements, implement features, and deliver updates using Git-based version control.

Audio Visual Solutions

Entry-Level IT Technician - Contract

Anaheim, CA

November 2024

- Installed and troubleshooted computer systems and network-connected equipment in live, client-facing environments

TECHNICAL SKILLS

Cloud & Infrastructure: Microsoft Azure, AWS (EC2, EKS), Terraform, Docker, Kubernetes, Linux, NGINX

CI/CD & Source Control: GitLab CI/CD, Argo CD, Git, GitHub, Bitbucket

Monitoring & Observability: Prometheus, Grafana

Languages: Python, JavaScript, TypeScript

Databases & Other: PostgreSQL, Supabase, Jira
